

POLICY

Sustainability

Hutchinson Builders is committed to the long term integration of Environmentally Sustainable practices throughout the organisation.

We will adopt strategies and embrace opportunities that arise from environmental, technological and social developments. Our objective is to design, construct and manage buildings that provide a healthy working environment based on sustainable and energy efficient principles.

The sustainable design, construction and operational practices within Hutchinson Builders' framework are aimed at ensuring we consistently achieve or exceed recognised energy, water and waste management benchmarks that have a direct or indirect impact on the environment.

The leadership team demonstrates this commitment by:

- Ensuring that the design, construction and operation of our projects meets specified life cycle and sustainability requirements
- Empowering workers and associates to implement sustainable work processes
- Monitoring and reporting against credible objectives and targets especially for the utilisation and production of energy, water and waste
- Engaging all relevant parties in effective communication and consultation processes
- Maintaining management systems designed to guide the progress and continuous improvement in the area of sustainability
- Complying with legal and other requirements

Hutchinson Builders recognises its responsibility to practice and promote behaviours that support activities which contribute to effective sustainability practices within the community.

This Sustainability Policy will be communicated to all relevant parties.

Greg Quinn

Managing Director
