

Sustainability

Hutchies is committed to the long term integration of environmentally sustainable practices throughout our organisation and projects.

We will adopt strategies and embrace opportunities that arise from environmental, technological and social developments. Our objective is to design, construct and manage buildings that create healthy environments based on sustainable and energy efficiency principles.

The sustainable design, construction and operational practices within Hutchies' framework are aimed at ensuring we consistently achieve or exceed recognised energy, water and waste management benchmarks that have a direct or indirect impact on the environment.

We demonstrate this commitment by:

- Considering whole of life and sustainability factors in the design, construction of our projects and operation of our business
- Empowering our people to implement sustainable work processes
- Monitoring and reporting against credible objectives and targets applicable for sustainable building certifications in the utilisation and production of energy, water and waste
- Adopting procurement techniques that consider recycled or recyclable materials
- Minimising waste on our projects / in our operations
- Recycling, reusing or repurposing materials and products where possible
- Complying with legal and other relevant requirements

Hutchies recognises its responsibility to practice and promote behaviours that support activities which contribute to effective sustainability practices within the community.

This Sustainability Policy will be communicated to all relevant parties.

Greg Quinn
